

EcoCIPP LINING CASE HISTORY

Pipe Rehabilitation From Perco

Client: Ministry of Defence/Carillion

Project: Asbestos Cable Duct Relining by EcoCIPP Lining, RAF Valley, Anglesey

Sub-contractor: Perco Engineering Services

When asbestos cement cable ducts at RAF Valley in Anglesey, North Wales needed upgrading we were called in to look at the problem by main contractor, Carillion.

RAF Valley is the busiest RAF airfield and provides fast jet and helicopter search and rescue training for the Royal Air Force and Royal Navy.

We recommended relining the 30 metre length of 150mm ID pipe using EcoCIPP. After excavating launch and recovery pits, a specialist contractor removed two sections of the asbestos

pipe and we surveyed the pipe by CCTV.

The EcoCIPP liner was then installed in the existing pipe and new cables pulled through for connection.

There was no disruption to station operations during the works.

For more information regarding this project please contact our Sales Director, Nick Sheehan on 01604 590200.
